PRIORS COMPARED

11

HELD-OUT PA

37,547

Held-Out Scores

Fitted on plate appearances before 2026-08-20, scored on the 37,547 that came after (actual HR rate 2.98%). No outcome in the test window was visible during fitting.

Metrics are per plate appearance; the probabilities lower down are per game.

Read AUC first — the slate ranks hitters and takes the top six, so ordering is what matters. Brier and log loss are dominated by the ~3% base rate and barely separate the priors.

Prior	AUC	Top-decile lift	Brier	Log loss	Cal. RMSE
Flat league League HR rate as the prior for every hitter.	0.5821	1.57×	0.02884	0.13311	0.00497
KNN comps Prior is the pooled rate of the nearest comparables.	0.5918	1.49×	0.02882	0.13253	0.00433
SVR Support-vector regression on the same feature matrix.	0.5856	1.48×	0.02891	0.13388	0.00797
Random forest Forest regression; a learned similarity metric.	0.5864	1.48×	0.02888	0.13315	0.00699
Core (KNN+SVR) Blend of KNN and SVR, no forest.	0.5918	1.49×	0.02882	0.13253	0.00433
Forest blend KNN + SVR + forest, weights fitted out-of-fold.	0.5918	1.49×	0.02882	0.13253	0.00433
Linear regression Ordinary least squares on the same features.	0.5886	1.51×	0.02886	0.13311	0.00561
Logistic regression Binomial logistic on the per-PA home run outcome.	0.5901	1.54×	0.02891	0.13324	0.00766
Neural net (torch) Two-layer PyTorch MLP, PA-weighted, trained on the same features.	0.5890	1.52×	0.02886	0.13294	0.00667
XGBoost Gradient-boosted trees, depth 3 with subsampling and L2.	0.5871	1.52×	0.02891	0.13346	0.00756

Blend weights (forest variant): KNN 1.00, SVR 0.00, RF 0.00

Shrinkage K per prior: league 257, knn 257, svr 257, rf 257, core 257, ensemble 257, linear 257, logistic 257, nn 257, xgb 257 — estimated by method of moments on out-of-fold residuals, not hand-tuned.

Thin-Sample Subset

The same held-out window, restricted to hitters with fewer than 100 plate appearances before the cutoff (4,288 PA, actual HR rate 2.50%). For a regular with 600 PA the observed record swamps any prior, so the priors mostly separate here.

Prior	AUC	Top-decile lift	Brier	Log loss	Cal. RMSE
Flat league League HR rate as the prior for every hitter.	0.5301	1.49×	0.02435	0.11710	0.01018
KNN comps Prior is the pooled rate of the nearest comparables.	0.5362	1.03×	0.02451	0.11926	0.01575
SVR Support-vector regression on the same feature matrix.	0.5455	1.03×	0.02508	0.12756	0.02850
Random forest Forest regression; a learned similarity metric.	0.5515	1.21×	0.02486	0.12293	0.02414
Core (KNN+SVR) Blend of KNN and SVR, no forest.	0.5362	1.03×	0.02451	0.11926	0.01575
Forest blend KNN + SVR + forest, weights fitted out-of-fold.	0.5362	1.03×	0.02451	0.11926	0.01575
Linear regression Ordinary least squares on the same features.	0.5491	1.12×	0.02477	0.12361	0.02114
Logistic regression Binomial logistic on the per-PA home run outcome.	0.5493	1.12×	0.02506	0.12345	0.02702
Neural net (torch) Two-layer PyTorch MLP, PA-weighted, trained on the same features.	0.5596	1.03×	0.02465	0.12072	0.01951
XGBoost Gradient-boosted trees, depth 3 with subsampling and L2.	0.5616	1.03×	0.02509	0.12464	0.02993

Per-game probabilities: each prior's per-PA rate run through this hitter's own plate appearances, park, weather, bullpen and times-through-the-order terms. Only the prior changes across the columns — every other term is held fixed, so a left-to-right spread is the prior disagreeing about the hitter, not the context.
