HIT PICKS WITH AT LEAST ONE HIT

Scored against the day's box scores, refreshed each time the page loads (as of 2026-10-01 14:17:39). A pick counts as decided only once its game is final.

Projected Hits

Expected hits from the hitter's rate and his contact quality, the starter's hits allowed and strikeout rate, the bullpen, the park, and his plate appearances for his lineup slot, each weighted by what the 2026 season replay showed it is worth. The rows below show the matchup pieces.

5-Pick Parlays

The model's best judgment in two tickets: its five likeliest home run bats and its five likeliest hit bats, one leg per game so the legs are independent and the chance is simply their product. Tickets lock the moment any of their games starts; a scratched player's leg is void and the rest ride. Parlays are entertainment with a steep house edge — never stake what you cannot afford to lose. This day was over before the parlays existed, so they were built from that morning's projections and graded against what happened.

Five-Homer Parlay

built after the fact

X LOST

The five likeliest home run bats on the slate, one per game. A true long shot: every leg has to leave the yard, so this one is priced like the lottery ticket it is.

Five-Hit Parlay

built after the fact

X LOST

The five likeliest bats to get a hit, one per game. The model's steadiest five-leg ticket — and still one that misses most days.

Batter vs Pitcher History

Hitters with a notable line against today's opposing starter.

Hitter	Starter	Line	Rate	Season rate	HR	K
Jake Bauers Milwaukee Brewers	Andre Pallante	4-for-6	0.667	0.220	1	0

Sal Frelick Milwaukee Brewers	Andre Pallante	3-for-6	0.500	0.205	0	0
Jackson Chourio Milwaukee Brewers	Andre Pallante	2-for-6	0.333	0.262	0	0
Brice Turang Milwaukee Brewers	Andre Pallante	2-for-6	0.333	0.229	0	2

Context only — this feeds none of the projections above. The largest batter-vs-pitcher sample all season is 13 plate appearances, and only about 520 pairs reach even 8. At that size the standard error on a hit rate is roughly .16, wider than the entire spread of true talent between major-league hitters. A 4-for-9 line is noise that looks like a trend, so it is shown with its sample size attached and deliberately kept out of the model.

Read AUC first. The slate ranks hitters and takes the top six, so ordering is what matters; AUC asks whether home runs were ranked above non-home-runs. Per-PA Brier and log loss are dominated by the ~3% base rate and barely separate the models. Metrics are per plate appearance, while the probabilities above are per game.
