3/6

HIT PICKS WITH AT LEAST ONE HIT

Scored against the day's box scores, refreshed each time the page loads (as of 2026-10-04 04:13:44). A pick counts as decided only once its game is final.

Projected Hits

Expected hits from the hitter's rate and his contact quality, the starter's hits allowed and strikeout rate, the bullpen, the park, and his plate appearances for his lineup slot, each weighted by what the 2026 season replay showed it is worth. The rows below show the matchup pieces.

Batter vs Pitcher History

Hitters with a notable line against today's opposing starter.

Hitter	Starter	Line	Rate	Season rate	HR	K
Yandy Díaz Tampa Bay Rays	Gerrit Cole	3-for-6	0.500	0.262	0	1
Randal Grichuk Chicago White Sox	Parker Messick	5-for-12	0.417	0.276	0	1
Cedric Mullins Tampa Bay Rays	Gerrit Cole	2-for-7	0.286	0.179	1	1

Ben Rice New York Yankees	Drew Rasmussen	1-for-10	0.100	0.230	1	5
Junior Caminero Tampa Bay Rays	Gerrit Cole	0-for-8	0.000	0.242	0	1

Context only — this feeds none of the projections above. The largest batter-vs-pitcher sample all season is 13 plate appearances, and only about 520 pairs reach even 8. At that size the standard error on a hit rate is roughly .16, wider than the entire spread of true talent between major-league hitters. A 4-for-9 line is noise that looks like a trend, so it is shown with its sample size attached and deliberately kept out of the model.

Read AUC first. The slate ranks hitters and takes the top six, so ordering is what matters; AUC asks whether home runs were ranked above non-home-runs. Per-PA Brier and log loss are dominated by the ~3% base rate and barely separate the models. Metrics are per plate appearance, while the probabilities above are per game.
