HIT PICKS WITH AT LEAST ONE HIT

Scored against the day's box scores, refreshed each time the page loads (as of 2026-09-15 16:04:55). A pick counts as decided only once its game is final.

Projected Hits

Same odds-ratio matchup as the strikeout model, applied to contact: the hitter's rate and the pitcher's hits-allowed rate combined relative to league, then split across starter and bullpen exposure.

Batter vs Pitcher History

Hitters with a notable line against today's opposing starter.

Hitter	Starter	Line	Rate	Season rate	HR	K
Miguel Vargas Chicago White Sox	Gavin Williams	4-for-9	0.444	0.208	1	2
Andrew Benintendi Chicago White Sox	Gavin Williams	2-for-6	0.333	0.218	0	2
Chase Meidroth Chicago White Sox	Gavin Williams	2-for-6	0.333	0.234	0	1

Braden Montgomery Chicago White Sox	Gavin Williams	2-for-6	0.333	0.187	0	1
Sam Antonacci Chicago White Sox	Gavin Williams	0-for-9	0.000	0.231	0	2

Context only — this feeds none of the projections above. The largest batter-vs-pitcher sample all season is 13 plate appearances, and only about 520 pairs reach even 8. At that size the standard error on a hit rate is roughly .16, wider than the entire spread of true talent between major-league hitters. A 4-for-9 line is noise that looks like a trend, so it is shown with its sample size attached and deliberately kept out of the model.

Read AUC first. The slate ranks hitters and takes the top six, so ordering is what matters; AUC asks whether home runs were ranked above non-home-runs. Per-PA Brier and log loss are dominated by the ~3% base rate and barely separate the models. Metrics are per plate appearance, while the probabilities above are per game.
