4/6

HIT PICKS WITH AT LEAST ONE HIT

Scored against the day's box scores, refreshed each time the page loads (as of 2026-09-18 04:44:19). A pick counts as decided only once its game is final.

Projected Hits

Same odds-ratio matchup as the strikeout model, applied to contact: the hitter's rate and the pitcher's hits-allowed rate combined relative to league, then split across starter and bullpen exposure.

X **MISS**projected 1.20 hits → 0-5 | 2 K

1

Yandy Díaz

Tampa Bay Rays

1.20 hits

75% chance of at least one

Season rate	24.5%

vs starter (RHP)	23.6% × 2.4 PA
vs bullpen	22.2% × 2.3 PA
Starter allows	22.4%

✓ 1 H 1-4 | R

Batter vs Pitcher History

Hitters with a notable line against today's opposing starter.

Hitter	Starter	Line	Rate	Season rate	HR	K
Juan Soto New York Mets	Aaron Nola	3-for-6	0.500	0.225	2	0
Carson Benge New York Mets	Aaron Nola	2-for-6	0.333	0.246	0	1
A.J. Ewing New York Mets	Aaron Nola	2-for-6	0.333	0.227	0	2

Context only — this feeds none of the projections above. The largest batter-vs-pitcher sample all season is 13 plate appearances, and only about 520 pairs reach even 8. At that size the standard error on a hit rate is roughly .16, wider than the entire spread of true talent between major-league hitters. A 4-for-9 line is noise that looks like a trend, so it is shown with its sample size attached and deliberately kept out of the model.

Brier: 0.02897

Log Loss: 0.13338

Cal. RMSE: 0.00498

Read AUC first. The slate ranks hitters and takes the top six, so ordering is what matters; AUC asks whether home runs were ranked above non-home-runs. Per-PA Brier and log loss are dominated by the ~3% base rate and barely separate the models. Metrics are per plate appearance, while the probabilities above are per game.
