5/6

HIT PICKS WITH AT LEAST ONE HIT

Scored against the day's box scores, refreshed each time the page loads (as of 2026-09-30 11:05:42). A pick counts as decided only once its game is final.

Projected Hits

Same odds-ratio matchup as the strikeout model, applied to contact: the hitter's rate and the pitcher's hits-allowed rate combined relative to league, then split across starter and bullpen exposure.

X **MISS**projected 1.17 hits → 0-4

1

Yandy Díaz

Tampa Bay Rays

1.17 hits

74% chance of at least one

Season rate	24.2%

Context only — this feeds none of the projections above. The largest batter-vs-pitcher sample all season is 13 plate appearances, and only about 520 pairs reach even 8. At that size the standard error on a hit rate is roughly .16, wider than the entire spread of true talent between major-league hitters. A 4-for-9 line is noise that looks like a trend, so it is shown with its sample size attached and deliberately kept out of the model.

Top-decile lift: 1.49x

Brier: 0.02847

Log Loss: 0.13139

Cal. RMSE: 0.00574

Read AUC first. The slate ranks hitters and takes the top six, so ordering is what matters; AUC asks whether home runs were ranked above non-home-runs. Per-PA Brier and log loss are dominated by the ~3% base rate and barely separate the models. Metrics are per plate appearance, while the probabilities above are per game.
