MODEL LAB · 2026-10-13

Every prior, same slate

The held-out scores that decided which prior is served, then how each one would have ranked today's hitters.

Held-out scores

Fitted on plate appearances before 2026-09-01, scored on the 28,643 that came after (actual HR rate 3.05%). No outcome in the test window was visible during fitting. **Read AUC first** — the slate ranks hitters and takes the top six, so ordering is what matters. Brier and log loss are dominated by the ~3% base rate and barely separate the priors. Metrics are per plate appearance; the probabilities lower down are per game.

PRIOR	AUC	TOP-DECILE LIFT	BRIER	LOG LOSS	CAL. RMSE
Flat league League HR rate as the prior for every hitter.	0.5777	1.60×	0.02950	0.13551	0.00489
KNN comps Prior is the pooled rate of the nearest comparables.	0.5958	1.48×	0.02946	0.13462	0.00484
SVR Support-vector regression on the same feature matrix.	0.5884	1.42×	0.02950	0.13532	0.00650
Random forest Forest regression; a learned similarity metric.	0.5894	1.44×	0.02949	0.13501	0.00627
Core (KNN+SVR) Blend of KNN and SVR, no forest.	0.5958	1.48×	0.02946	0.13462	0.00484
Forest blend KNN + SVR + forest, weights fitted out-of-fold.	0.5957	1.47×	0.02946	0.13462	0.00483
Linear regression Ordinary least squares on the same features.	0.5900	1.42×	0.02948	0.13505	0.00535
Logistic regression Binomial logistic on the per-PA home run outcome.	0.5906	1.49×	0.02950	0.13515	0.00657
Neural net (torch) Two-layer PyTorch MLP, PA-weighted, trained on the same features.	0.5896	1.48×	0.02949	0.13505	0.00660

Thin-sample subset

The same held-out window, restricted to hitters with fewer than 100 plate appearances before the cutoff (3,116 PA, actual HR rate 2.37%). For a regular with 600 PA the observed record swamps any prior, so the priors mostly separate here.

Per-game probabilities: each prior's per-PA rate run through this hitter's own plate appearances, park, weather, bullpen and times-through-the-order terms. Only the prior changes across the columns — every other term is held fixed, so a left-to-right spread is the prior disagreeing about the hitter, not the context. Shading grows with the probability.
