MODEL LAB · 2026-10-11

Every prior, same slate

The held-out scores that decided which prior is served, then how each one would have ranked today's hitters.

Held-out scores

Fitted on plate appearances before 2026-08-31, scored on the 29,344 that came after (actual HR rate 3.06%). No outcome in the test window was visible during fitting. **Read AUC first** — the slate ranks hitters and takes the top six, so ordering is what matters. Brier and log loss are dominated by the ~3% base rate and barely separate the priors. Metrics are per plate appearance; the probabilities lower down are per game.

PRIOR	AUC	TOP-DECILE LIFT	BRIER	LOG LOSS	CAL. RMSE
Flat league League HR rate as the prior for every hitter.	0.5832	1.56×	0.02964	0.13599	0.00484
KNN comps Prior is the pooled rate of the nearest comparables.	0.5992	1.54×	0.02960	0.13502	0.00474
SVR Support-vector regression on the same feature matrix.	0.5923	1.41×	0.02964	0.13589	0.00646
Random forest Forest regression; a learned similarity metric.	0.5917	1.41×	0.02963	0.13553	0.00590
Core (KNN+SVR) Blend of KNN and SVR, no forest.	0.5992	1.54×	0.02960	0.13502	0.00474
Forest blend KNN + SVR + forest, weights fitted out-of-fold.	0.5989	1.52×	0.02960	0.13504	0.00512
Linear regression Ordinary least squares on the same features.	0.5936	1.48×	0.02962	0.13560	0.00490
Logistic regression Binomial logistic on the per-PA home run outcome.	0.5949	1.57×	0.02963	0.13552	0.00586
Neural net (torch) Two-layer PyTorch MLP, PA-weighted, trained on the same features.	0.5937	1.50×	0.02962	0.13544	0.00581

Thin-sample subset

The same held-out window, restricted to hitters with fewer than 100 plate appearances before the cutoff (3,195 PA, actual HR rate 2.44%). For a regular with 600 PA the observed record swamps any prior, so the priors mostly separate here.

Per-game probabilities: each prior's per-PA rate run through this hitter's own plate appearances, park, weather, bullpen and times-through-the-order terms. Only the prior changes across the columns — every other term is held fixed, so a left-to-right spread is the prior disagreeing about the hitter, not the context. Shading grows with the probability.

Built for research and entertainment. Probabilities are estimates, not guarantees; never stake what you cannot afford to lose. Data: MLB Stats API play-by-play, lineups and live scores; ESPN injuries and bios.
